CULTURE OF PEONIES

The best time of all the year to plant Peonies is from about Sept. 1 until the ground freezes. October dug roots will have larger "eyes" than those dug Sept. 1, but they will not produce any better results. When you receive your shipment of roots soak them in water for several hours before planting. Prepare the ground by deep digging or plowing, working in some raw ground bone as a permanent food for the roots to feed on. Top dressings of wood ashes from year to year are very beneficial. Plant so the eyes are only about two inches below the level of the ground and plant where drainage is good, as no water should stand where Peonies are to grow. Keep ground free from weeds.

It takes about three years for a Peony to become established so it will bear its finest flowers. Planted three feet apart each way the roots can remain undisturbed for a period of 5 to 10 years and each year

develop into a finer plant. After the ground freezes cover a new planting with some straw, leaves or other litter to prevent heaving roots out of ground by the action of the frost. In the spring remove covering and cultivate frequently from April to September to insure the finest flower from year to year.

THE CUT FLOWERS

When cutting Peonies always leave two or more leaves on the stalk from which you cut, and it is better not to cut all the flowers from any plant.

Leave some leaves on each stalk and some flowers on each plant. It pays.

“LOVELY LILIES”

(The Hardy Ones)

Hardy Liliiums occupy a very important place among the hardy plants as they are very effective in the flower or shrubbery border and do well in such situations, as they like some shade and ground cover that will keep their roots cool and moist.

Lilies revel in leaf mould and granulated peat moss and it can be used without fear of harm.

If soil is heavy or sticky, mix sand freely with soil and place some around the bulb when planting.

Liliiums should be planted at least twice the depth of the bulb and the stem rooting varieties still deeper.

Each

Candidum or Madonna—White; June flowering.	
Plant in Aug.-Sept. Cover 2 inches.....	.40
Hanski—Golden yellow, spotted brown; June flowering. Cover 6-9 inches. Sept. del.....	.50
Henryi—Yellow of the Speciosum type. August flowering. Cover 6-9 inches. Oct. del.....	.50
Regale—Rose, cream and white. July flowering. Cover 6-8 inches. Sept. del.....	.35
Speciosum—White, suffused red. Aug.-Sept. flowering. Cover 6 inches. Oct. del.....	.35
Tenuifolium—Deep scarlet Coral Lily. June flowering. Cover 4 to 6 inches. Sept. del.....	.20
Tigrinum Splendens—Single Tiger Lily. Oct. del.	.25
Tigrinum Fortunei—Giant Tiger Lily. Oct. del.	.40
Wallacei—Rosy-apricot tinted flowers. August flowering. Cover 4 inches. Sept. del.....	.25

ELEGANS TYPE

From Japan

They are dwarf growing early flowering Lilies adapted to group planting. The flowers are upright, cup shaped and most effective. Stem rooting. Plant 4 to 6 inches deep. June-July flowering. 12 to 18 inches high.

Aurantiacum Verum—Clear mikado orange without spots. Very effective.

Flore Pleno—Double set of petals. Light yellow, spotted brown.

Kikak—Light apricot, spotted brown. Extra good.

Prince of Orange—Soft buff spotted maroon; very dwarf; only about 10 or 12 inches.

Rosea—Brazil red shaded lighter toward center; few spots.

Sanguineum—Dark red with a few black spots.

Good flowering size bulbs: 20c each

UMBELLATUM TYPE

From Europe

A showy section of Lilies of very easy culture. Stem rooting. Cover 6 to 8 inches deep; flowering in June, ranging from 18 to 30 inches in height.

Aurora—Very fine apricot and orange.

Splendidum—Bright vermillion shading to rich copper-crimson.

Vermillion Brilliant—Intense vermillion-scarlet; very distinct.

35c each; 3 for \$1.00

JAPANESE IRIS

July Flowering

For best results plant on a slope or other well drained situation. While they are forming buds in June, water or liquid cow manure is very beneficial. Well rotted manure or humus keeps them thriving. They do not seem to like lime or bone meal.

Aifukurin—Sgl. White ground suffused and heavily edged violet, petaloid stigmas edged petunia violet.

A very beautiful variety.

Catherine Parry—Dbl. Blue overlaid rosy-red, high tufts in center almost triple.

Eleanor Parry—Dbl. Claret red, flamed white and blue. Compact medium size flower. Good.

Hotari—Sgl. Beautiful "pinkish" cast.

Jeannette Parry—Sgl. White suffused with lines of bluish violet, petaloid stigmas amethyst violet.

Kongo San—Dbl. Dark blue.

Malmaison—Dbl. Very late. Large heavy blooms of bluish violet on a cream base suffused reddish pink.

Margaret S. Hendrickson—Triple. Soft bluish violet, large wavy petals. White center with cast of blue radiating therefrom.

Marjorie Parry—Dbl. Delicate light mauve, tufted center. Extra fine.

Nishiki Yama—Dbl. Rosy-red suffused white in center.

Osamaku-miyo—Dbl. Ivory white veined blue.

Shiranami—Dbl. Large white with ruffled petals.

Universe—Dbl. Soft blue.

Wakamusha—Dbl. Ivory white veined plum, compact flower.

Yurushi-no-iro—Dbl. Mahogany red.

Flowering Size Plants

35c each; 3 for \$1.00; the set of 15, \$4.50

SIBERIAN IRIS

May and June

We have 5 or 6 varieties in shades of blue and 1 white.
30c each; set of 7 for \$1.75

GERMANICA IRIS

We have a selected collection of some of the best varieties.

Each 25c and up; a collection of 12 for \$3.00

"Top Notch"

GLADIOLUS BULBS

If there is a universal flower I believe it is the *Gladiolus*, for they can be and are grown with satisfaction East, West, North and South. Given a fairly good soil and a little care they will return full measure. Plant a few anyway, and if you have the room, provide for several plantings at intervals of 2 or 3 weeks to give a long season of bloom. They come into flower 12 to 15 weeks from time of planting.

Our prices are for No. 1 or first size bulbs. They have been treated for thrips. One hundred outstanding varieties.

Don Wyman Lemona

Goldeni Mrs. Wyman

The Gem

50c each; the 7 for \$3.00

LYCORIS SQUAMIGERA

Amaryllis Hallii

(The Magic Flower)

A perfectly hardy bulbous plant fine for the back of borders as the bulbs should remain undisturbed for several years. The leaves start into growth in early spring but die down during the summer after which the flower stem shoots up as if by magic near the end of August.

The flowers are produced in umbels of a pale lilac-pink color and delicately fragrant.

75c each; \$7.50 per doz.

"Come and See Them"

OUR PANSY PLANTS

are transplanted once

We endeavor to grow the best Pansies from the best seed produced by specialists and dig each plant of your selection with plenty of soil to insure success when planted in your garden.

40c per doz.—April to June

PEONIES

Come and see them bloom in June

Peonies can be planted with success from September to freezing. In this area we think the ground is cooler and in better condition for the roots after the middle of September than it is in August, which month seems to be recommended by so many recent writers. August may be good in the North where that month is like our November.
